

The Stocky export checklist

What to take out of Stocky before the read-only export window closes, whether or not you work with us. Shopify says Stocky is no longer available as of 31 August 2026, with read-only access to export your data for at least 90 days after that date. Do the first three while the export screens still open.

-
- 01 Open Stocky's reports and export what Shopify says to keep: all completed purchase order reports as CSV files, your stocktake history and your historical cost data. Export any other report your Stocky screens still offer too. Stocky is read-only now.

-
- 02 Save the files in a dated folder you own, outside Stocky. Shopify says to keep anything you need for tax or audit records, and Stocky's purchase orders and stocktakes can't be referenced inside Shopify after the move.
Source: Shopify Help, Transitioning from Stocky, checked 20 Oct 2026
-
- 03 Screenshot every supplier record. Suppliers can't be exported from Stocky.

-
- 04 For each supplier, write down the lead time, minimum order, payment terms and email address.
-
- 05 List your open supplier invoices, with due dates and whether each one is paid or unpaid.
-
- 06 Keep your last stocktake count sheet.
-
- 07 Turn inventory tracking on for the products you reorder. Shopify would not add untracked products to a purchase order.
Found on our demo store: fictional shop, synthetic data
-
- 08 Note the reorder point and usual order quantity for your best sellers.
-
